

## Electronically Stored Information

Lippes Mathias' Litigation Team approaches litigation matters holistically to ensure that our clients receive effective counsel at an appropriate cost throughout any lawsuit or investigation. A major change in litigation is the collection and review of electronic data. As businesses continue to rely on electronic storage and email communications, electronic discovery has become an increasingly complex and costly part of litigation. Our Electronic Discovery Team provides expertise and ability to navigate that process.

The Electronic Discovery Team at Lippes Mathias understands that electronic discovery strategy is synonymous with trial strategy. Our team draws on substantial experience with electronic discovery to create practical, reasonable, and cost-efficient results for clients. Leveraging technology to respond to client needs is essential for effectively navigating electronic discovery. By being proactive and thinking strategically from the start, we minimize cost and hassle for clients and ensure the best possible position in any lawsuit.

We recognize that every case is unique and that an individualized approach to electronic discovery is necessary to avoid the pitfalls and costs that often accompany it. We continue to assess developments in the electronic discovery landscape and apply the most effective technology and appropriate process to each matter.

With any electronic discovery project, teamwork is essential. Our lawyers and legal support professionals work together to ensure that the approach to electronic discovery is streamlined and measured. This approach allows us to communicate and work collaboratively, focusing on the appropriate process to optimize results. We ensure that complex electronic discovery matters are managed by members of our Litigation Team, who focus on ensuring that the electronic discovery strategy furthers the overall strategy in the lawsuit.
