

Risk Assessment and Environmental Insurance

Our attorneys assist our clients in all aspects of environmental risk assessment and insurance. We have significant experience assessing and allocating risk, and evaluating the role of insurance in project development, including in contract negotiation and insurance program design. We work closely with our clients and their brokers to tailor their insurance programs to their unique risk profiles and the demands of their projects. We provide accurate and granular risk analyses on claims as they arise in real-time, and coordinate responses to environmental claims to minimize risk. We also assist in the marshalling of claims to maximize insurance recoveries under multiple lines of insurance, including builder's risk, commercial general liability, pollution/environmental, property, and excess/umbrella insurance.
